The melanoma-associated antigen p97 has been found to be a GPI-anchored protein expressed on the cell surface which is able to bind iron. A soluble form of p97 can be isolated from the aqueous phase after Triton-X -114 phase separation. The soluble (hydrophilic) form of p74 does not contain ethanolamine and it has a slower rate of transport than GPI-anchored p97. The role of p97 in iron-transport suggests a use in modulating iron uptake by cells; p97, it agonists, antagonists and stimulants may be useful in treatment of conditions where iron-metabolism is disturbed, e.g. haemochromatosis and skin cancer. Expression of p97 and transferrin receptors) by reactive mid-rogilal cells associated with senile plaques in Alzheimer's Disease (AD) provides a means of diagnosing AD. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                    New GPI-anchored and soluble forms of P97 - for treating disorders of iron metabolism, delivering drugs to the brain and for diagnosis and treatment of Alzheimer's disease.

This invention relates to chondrogenesis promoters containing a membrane-bound transferrin-like protein (MTf). Chondrogenesis promoters, chondrogenesis regulators, MTf activators, MTf antagonist-containing chondral differentiation inhibitors are useful in diagnosis, prevention and treatment of diseases due to abnormal.chondral metabolism and bone metabolism e.g. bone diseases. The present sequence represents human DNA encoding MTf
transferrin-like
ent of diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    G; 406 T; 0 U; 0 Other;
Chondrogenesis promoters containing membrane-bound tran protein, useful in diagnosis, prevention and treatment abnormal chondral metabolism and bone metabolism.
                                                                                                                                                                                Disclosure; Page 36-37; 57pp; Japanese

CC The invention describes a cartilage cell differentiation stimulator
CC (containing a membrane-bound transferrin-like protein (MTf-BP) and a
CC membrane bound type transferrin-like protein (MTf) and an animal-derived
CC concanavalin-like drug. The cartilage differentiation stimulator can be
CC used in diagnosis, prevention and treatment of cartilage and bone
CC weed in diagnosis, prevention and treatment of cartilage and bone
CC call differentiation, cell growth and construction of extracellular
CC matrix related diseases. MTf-BP strongly stimulates differentiation of
CC cartilage cells and exhibits similar action mechanism with that of plant
CC derived ConA. This sequence represents a cartilage cell differentiation
CC stimulator associated polypeptide described in the invention

melanoma. Insertion of the p97 gene into vaccinia virus yields the recombinant virus Vp97a-NY. BSC cells infected with this virus produce large amts. of p97, and the virus has immunogenic activity in vivo. (Updated on 01-JUL-2002 to add missing PI field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                     AlaileTyrGluAlaGlyLysGluHisGlyLeuLysProValValGlyGluValTyrAsp 100

The present invention relates to a method for the diagnosis of arthritic disorders, by assay of melanotransferrin in a biological sample, and deducing the presence of an arthritic disorder from the presence of a concentration of melanotransferrin significantly higher than in non-arthritic subjects. The method can be used for the diagnosis of arthritic disorders including rheumatoid arthritis, osteoarthritis and joint trauma. The present sequence is the coding sequence for human MTF, which was used in the present invention
                                                                                                                                                                                                                                                                                                                       Human; MTF; arthritic disorder; melanotransferrin; rheumatoid arthritis; osteoarthritis; joint trauma; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to chondrogenesis promoters containing a membrane bound transferrin-like protein (MTf). Chondrogenesis promoters, chondrogenesis regulators, MTf activators, MTf antagonist-containing chondral differentiation inhibitors are useful in diagnosis, prevention and treatment of diseases due to abnormal chondral metabolism and bone metabolism e.g. bone diseases. The present sequence represents rabbit DN
                                                                                                                                                                                                                                                                                                                                                                                                    Chondrogenesis promoters containing membrane-bound transferrin-like protein, useful in diagnosis, prevention and treatment of diseases due abnormal chondral metabolism and bone metabolism.
                                                                                                                          Chondrogenesis promoter; membrane-bound transferrin-like protein; MTf; Chondrogenesis regulator; MTf activator; bone metabolism; rabbit; chondral differentiation inhibitor; bone disease; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MetArgGlyProSerGlyAlaLeuTrpLeuLeuLeuAlaLeuArgThrValLeuGlyGly

(containing a membrane-bound transferrin-like protein (Wrf-BP) and a membrane bound type transferrin-like protein (Mrf)) and an animal-derived concanavalin-like drug. The cartilage differentiation stimulator can be used in diagnosis, prevention and treatment of cartilage and bone metabolism diseases. They can also be used for diagnosing biophylaxis, cell differentiation, cell growth and construction of extracellular matrix related diseases. Mrf-BP strongly stimulates differentiation of cartilage cells and exhibits similar action mechanism with that of plant derived ConA. This sequence represents a cartilage cell differentiation stimulator associated polypeptide described in the invention

```

The invention relates to mouse p97 protein, mp97 (a scialoglycoprotein) and its corresponding cDNA molecule. Mouse p97 protein and its DNA molecule are useful for identifying compounds that affects mp97 protein activity or expression. The invention also relates to a method for conditions, such as cancer, neurodegenerative diseases (e.g., Alzheimer's disease, Parkinson's disease, Huntington's disease), demyelinating diseases (e.g., multiple sclerosis), amyotrophic lateral sclerosis, disease, untrilla ind viral infections, deficiency diseases (e.g., wennicke's disease, nutritional polyneuropathy), epilepsy, psychosis, pain and neurological disorders, especially Alzheimer's disease. Mouse p97 DNA's

Claim 25; Page 53-54; 70pp; English.

are also useful in gene therapy. Mp97 proteins are useful for delivering therapeutic agents and pharmaceuticals across the blood placenta barrier as well as to other organs including liver. The invention is also useful for preparing antibodies and antisense oligonuclectides, the preparation of experimental systems to study mp97, and in diagnostic and therapeutic applications. Transgenic p97 mice is useful for identifying essential physiological roles for p97 in development and adult functioning of the organism and for testing potential therapeutic and diagnostic agents that are conjugated to p97 protein. The present cDNA sequence encodes mouse p97 (mp97) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                     183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to chondrogenesis promoters containing a membrane bound transferrin-like protein (MTf). Chondrogenesis promoters, chondrogenesis regulators, MTf activators, MTf antagonist-containing chondral differentiation inhibitors are useful in diagnosis, prevention and treatment of diseases due to abnormal chondral metabolism and bone metabolism e.g. bone diseases. The present sequence represents murine DN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         due

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes the anticoagulant protein, Draculin. Draculin is isolated from the saliva of vampire bats and is distinct from other known anticoagulants in that it inhibits both factors IX and X of the blood coagulation cascade. The anticoagulant activity is not inhibited by serine protease inhibitors such as PMFS or DFP. The molecular weight of Draculin ranges from 75-90 kD and may be used in treatment of acute myocardial infarction, deep vein thrombosis, pulmonary embolism, unstable angline, transient ischemic attacks, peripheral vascular or bypass occlusions and disseminated intravascular coagluation. (Updated on 25-MAR -2003 to correct PN field.)
                                                                          720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New anticoagulant protein, draculin, from vampire bat saliva - and related nucleic acid, vectors, transformed cells and probes, for treating myocardial infarction, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anticoagulant; Draculin; saliva; vampire bat; inhibition; factor IX; factor X; blood coagulation cascade; serine protease inhibitor; PMFS; acute mycardial infarction; deep vein thrombosis; pulmonary embolism; unstable angina; transient ischemic attack; peripheral vascular; DFP; bypass occlusion; disseminated intravascular coagluation; ds.

The invention relates to modified Tf fusion proteins comprising at least one therapeutic protein, polypeptide or peptide, in which the Tf portion is engineered to extend the serum half-life or bioavailability of the molecule. The modified Tf fusion protein preferably comprises a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New fusion protein, useful in the diagnosis and treatment of diseases or disorders relating to the respiratory, cardiovascular and digestive systems, comprises a transferrin protein fused to a therapeutic protein.

Tf moiety that has been modified to reduce or prevent glycosylation, iron binding and/or transferrin receptor binding. Nucleic acids encoding such fusion proteins, vectors, host cells and transgenic animals which produce the fusion protein in their serum or milk are also claimed. The modified fusion protein is useful for treating a disease or disease symptom, or for delivering a therapeutic agent complexed to the ferric iron of transferrin to the inside of a cell or across the blood-brain barrier. The modified fusion protein, or a nucleic acid encoding it, can be used in the diagnosis, prognosis, prevention and/or treatment of diseases and/or alsorders of the endocrine, nervous, immune, respiratory, cardiovascular, reproductive and diseasive systems, diseases and/or disorders relating to the blood or to cell proliferation, inflammatory conditions, and to treat viral, fungal, bacterial or parasitic infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          278

This invention describes novel recombinant human serum transferrin mutants with altered metal binding properties. The products of the invention act as iron chelators. The recombinant transferrins can be used in metal chelation therapy to bind and clear excess toxic metals in patients suffering from metal overloads. In particular transferrin mutants which bind iron with higher avidity than natural transferrin can be administered to individuals suffering from thalassemia to remove excess toxic iron from the body. Half-molecules or transferrin mutants with altered metal ion selectivities could be used to clear other toxic metals e.g. lead, mercury, cadmium copper or zinc from the body. Recombinant full length transferrin can also be used in non serum supplements or in tissue culture media. A transferrin half-molecule is and can be excreted in the urine, unlike the holo-proteins, so that the metal is not only chelated but also cleared from the body. The single half-molecules do not bind to transferrin receptors on the membrane of tissue cells and therefore do not deliver the iron to these tissues. A further advantage is that the human body probably recognizes the half-molecules as 'self' and would not elicit an immunological response. Using recombinant transferrin avoids the risk of contamination with HIV or metal is virus associated with transferrin purified from human serum.
                                                                                                                                                                                            Recombinant human serum transferrin mutants with altered metal binding properties are useful in metal chelation therapy and to clear excess toxic metals in patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence encodes the human serum transferrin described in the

```

The invention relates to detecting (M1) granulocyte (GC) activation CC (GCA), by detecting the level of expression of gene (B) (GB) identified by DNA chip analysis as given in the specification, and comparing the DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where additional expression of the least one gene in GB; (B) secreting (M2) GA by contacting GC with an agent that alters the expression of at least one gene in GB; (2) screening (M3) for an agent capable of modulating GGA or an inflammation (especially chronic) in a criser of graphs of a modulating GGA or an inflammation (especially chronic) in a pathogen or sterile inflammatory disease using the gene expression of the gene is indicative of genetially chronic) in a correcting (M4) an inflammation; (4) treating corresponse in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating corresponse in a manulation; (4) treating corresponse in a subject, exposure of a subject or septime in a subject, exposure of a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating corresponse in a subject, exposure of a subject to a pathogen or sterile inflammation in a tissue, and tissue and the sequence of a pathogen or sterile inflammatory distress syndrome, inflammatory bowel disease, ulcerative colities, periodomical disease, ulcerative colities, periodomical disease, and the present sequence represents a gene di Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity. progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN3553-ABN3455 in a tissue sample. The method is useful for diagnosing and detecting cytostatic activity. The method is useful for diagnosing and detecting in the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the patent did not sequences.
